

CASE STUDY

Michael Rowntree, a London financier, wanted to upgrade his prestigious apartment on the Albert Embankment in London. This top location deserved the very best money could buy, and Michael wanted to ensure his apartment was transformed into a truly stunning residence.

Showers were already part of the plan, but Michael was unhappy with the overall look of the original design which included a step in shower.

Installer Darren Daughton decided to see what alternative solutions were available. On visiting the Pump Technology website, he quickly discovered Whale's Dry-Deck pump system was the perfect solution. Dry-Deck allows a small installation depth of the pumped gully (35mm) and ensured that all the components could be hidden behind a panel in the wet room. Overall, using Dry-Deck meant that a beautiful wet room could be installed into the apartment with the reliable pump system hidden behind the wall (see the photograph). Michael was immediately delighted with the idea.

"I like to think of myself as ahead of the game, but clearly I had missed a major development in modern wet rooms," he said. "When Darren explained to me that I could have a lovely shower area without the need for a step, a tray or even a door I have to admit I was very surprised. I checked it all out and was very impressed with the special pump system developed by Whale. Whale specialists in Shower Drainage Solutions have a long established reputation for reliability. The Dry-Deck system has a well proven history. It was clearly the way forward for modern wet rooms and I had no hesitation in changing the plans so that a lovely wet room instead of a normal enclosed shower area could be created.

"I visited the site several times while the wet room was being created and the installation seemed quick and easy."

The building work has now been completed and Michael says the creation of a stunning wet room has added considerably to the value of the apartment. It has already attracted really favourable comments from other apartment owners.

Benefits

- Flow rate up to 20 ltrs/min – ideal for mixers & power showers*
- The flow rate of the Dry-Deck system automatically adjusts to changes in shower flow rate
- No filter in waste system – no cleaning required
- Valves integral to the pump prevent odours escaping from the drainage pipe
- Almost silent when running

* Check flow rate of shower to ensure that the maximum flow rate of the shower is less than 20 ltrs/min

2 year warranty
National service network
